Notes: (1) City Entorcomont Officer could require any of these measures at any locations at his specific discretion (2) Designated BMPs for areas tributary to 303 (d) faited water bodies, coastal legoces, and waters on sensitive lands

### INITIAL STUDY CHECKLIST

Date: August 3, 2007

Project Number:

134590

Name of Project:

**Urban Runoff Management** 

Plans

#### II. **ENVIRONMENTAL ANALYSIS:**

The purpose of the Initial Study is to identify the potential for significant environmental impacts which could be associated with a project pursuant to Section 15063 of the State CEOA Guidelines. In addition, the Initial Study provides the lead agency with information, which forms the basis for deciding whether to prepare an Environmental Impact Report, Negative Declaration, or Mitigated Negative Declaration. This Checklist provides a means to facilitate early environmental assessment. However, subsequent to this preliminary review, modifications to the project may mitigate adverse impacts. All answers of "yes" and "maybe" indicate that there is a potential for significant environmental impacts, and these determinations are explained in Section IV of the Initial Study.

> Yes Maybe No

### I. AESTHETICS / NEIGHBORHOOD CHARACTER – Would the proposal result in:

A. The obstruction of any vista or scenic view from a public viewing area?

X

The following activity types contained in the plans would not result in the construction of above-ground structures and, therefore, would not obstruct views: water quality monitoring and pollutant source characterization: education, training, and outreach; inspection, investigation, and enforcement; good housekeeping BMPs; land use planning; Storm Water Standards Manual Update; and other non-structural projects. The following activity type may result in above-ground structures: capital improvement projects. However, it is anticipated that these structures would be improvements to existing City streets, parks (underground), parking lots, and the storm drain system and, therefore, would not obstruct views.

		Yes	Maybe	<u>No</u>
В.	The creation of a negative aesthetic site or project?			_X_
	See I.A.			
C.	Project bulk, scale, materials, or styles which would be incompatible with surrounding development?	:		_X_
	See I.A. The capital improvement projects would be integrated into existing City streets, parks (underground), parking lots, and the storm drain system.			
D.	Substantial alteration to the existing character of the area?			_X_
	See I.C.			
E.	The loss of any distinctive or landmark tree(s), or a stand of mature trees?			_X_
	See I.A. It is anticipated that no distinctive or landmark trees or a stand of mature would be affected by the capital improvement projects since these projects would be within existing City streets, parks (underground), parking lots, and the storm drain system.			
F.	Substantial change in topography or ground surface relief features?			<u>x</u>
	See I.A. The capital improvement projects would be integrated into current City streets, parks (underground), parking lots, and the storm drain system. Excavations in the right of way would be backfilled, and the ground surface and topography would be returned to their original state.			

		Yes	<u>Maybe</u>	<u>No</u>
G.	The loss, covering, or modification of any unique geologic or physical features, such as a natural canyon, sandstone bluff, rock outcrop, or hillside with a slope in excess of 25 percent?			_X_
	See I.F. The capital improvement projects would improve existing City streets, parks (underground), parking lots, and the storm drain system and would not require the modification of unique geologic or physical features.		×	
H.	Substantial light or glare?			<u>X</u>
	The activity types would not produce light or glare.			
I.	Substantial shading of other properties?	-	·	_X_
	See I.A.			
	RICULTURAL RESOURCES / NATURAL RES SOURCES – Would the proposal result in:	OURCE	S / MINER	AL
A.	The loss of availability of a known mineral resource (e.g., sand or gravel) that would be of value to the region and the residents of the State?		·	_X_
	The capital improvement projects would be within existing City streets, parks, parking lots, and the storm drain system, which are not suitable sites for sand and/or gravel extraction.			
B.	The conversion of agricultural land to non-agricultural use or impairment of the agricultural productivity of agricultural land?			_X_
	The plans contain activity types to be implemented within urbanized areas and (for water quality monitoring) local water bodies.  No agricultural land would be impaired or converted to non-agricultural use			

II.

			Yes	Maybe	No
m.	ΑI	R QUALITY – Would the proposal:			
	A.	Conflict with or obstruct implementation of the applicable air quality plan?	1		_X
		See I.A. Construction of the capital improvement projects would not conflict with the State Implementation Plan or other local air quality plans given standard construction practices to be in place, such as stockpile protection and daily sweeping of work area, to ensure air quality standards would not be violated. The improvements to City streets, parks (underground), parking lots, and the storm drain system would not affect air quality during operation.			
	B.	Violate any air quality standard or contribute substantially to an existing or projected air quality violation?			_X_
		Grading equipment and procedures would comply with Air Pollution Control District (APCD) regulations and would not violated any air quality standard or contribute substantially to an existing or projected air quality violation due to standard construction practices, such as regular maintenance of air filters on construction equipment and shut down of engines if idling is anticipated to be more than five minutes. See III.A.			
	C.	Expose sensitive receptors to substantial pollutant concentrations?			<u>X</u>
		Sensitive receptors that may be impacted by implementation of the plans are primarily residents and businesses. The activity types would not generate substantial air pollutants during implementation. See III.A and III.B.			

		Yes	Maybe	No
D.	Create objectionable odors affecting a substantial number of people?	·——		_X_
	Diesel exhaust from construction equipment would be minor and temporary. The activity types in the plans would not produce odors.			
E.	Exceed 100 pounds per day of Particulate Matter 10 (dust)?		-	_X_
	Temporary minor dust generation during grading and construction of capital improvement projects would be subject to APCD regulations and is not anticipated to exceed 100 pounds per day of Particulate Matter 10 because of the implementation of standard construction practices, such as daily sweeping of work area and moistening of exposed soils. Other than during construction of capital improvement projects, implementation of the activity types in the plans would not generate dust.			
F.	Alter air movement in the area of the project?  Implementation of the activity types in the		n <u>n</u>	_X_
G.	Cause a substantial alteration in moisture or temperature, or any change in climate, either locally or regionally?			_X_
	Implementation of the activity types in the plans would not affect climatic conditions.			

			Yes	Maybe	<u>No</u>
IV.	BI	OLOGY – Would the proposal result in:			
	A.	A reduction in the number of any unique, rare, endangered, sensitive, or fully protected species of plants or animals?			<u>X</u>
		The capital improvement projects would be integrated into existing City streets, parks (underground), parking lots, and the storm drain system and would not affect habitats or species with special status. Implementation of the other activity types in the plans would occur in urbanized areas and would not involve permanent structures and, therefore, would not result in the reduction of plants or animals with special status.			
	B.	A substantial change in the diversity of any species of animals or plants?			_X_
		See IV.A.			
	C.	The introduction of invasive species of plants into the area?			_X_
		Native and naturalized plants species would be used to vegetate planter boxes that would be part of some of the capital improvement projects within existing City streets. No invasive species would be planted.			
	D.	Interference with the movement of any resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors?			_X_
		Only the activity type of periodic water quality monitoring and pollutant source characterization may potentially involve implementation within wildlife corridors.  Because this activity type does not involve permanent structures or large numbers of people at one time, it is anticipated that it would not interfere with wildlife movement.			

		Yes	<u>Maybe</u>	<u>No</u>
E.	An impact to a sensitive habitat, including, but not limited to, streamside vegetation, aquatic, riparian, oak woodland, coastal sage scrub, or chaparral?			<u>X</u>
	See IV.D.			
F.	An impact on City, State, or federally regulated wetlands (including, but not limited to, coastal salt marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption or other means?	51		_X_
	See IV.D. Implementation of the activity types in the plans would not affect wetlands.			
G.	Conflict with the provisions of the City's Multiple Species Conservation Program, Subarea Plan; or other approved local, regional, or State habitat conservation plan?		,	_X_
	See IV.A and IV.D.			
EN	ERGY – Would the proposal:			
A.	Result in the use of excessive amounts of fuel or energy (e.g., natural gas)?			_X_
	Construction of the capital improvement projects within existing City streets, parks (underground), parking lots, and the storm drain system would involve typical amounts of fuel and energy. No significant impacts to energy, fuel, or power are anticipated during implementation of the other activity types in the plans.			
В.	Result in the use of excessive amounts of power?			_X_
	See V A			

V.

			Yes	Maybe	<u>No</u>
VI.	GE	COLOGY / SOILS – Would the proposal:			
	A.	Expose people or property to geologic hazards, such as earthquakes, landslides, mudslides, ground failure, or similar hazards?			_X_
		The watershed activities include various types of capital improvement projects that may construct infiltration strips and boxes within existing City streets, parks (underground), and parking lots. Excessive infiltration has the potential to damage nearby street, sidewalk, and building improvements but would result in significant impacts. See the Initial Study discussion.			
	В.	Result in a substantial increase in wind or water erosion of soils, either on or off the site?	No.		_X_
		Dust control and soil erosion prevention measures, such as stockpile protection and sand/gravel bag barriers during construction of the capital improvement projects would keep airborne dust and water erosion of soils to a minimum. All activity types, including the capital improvement projects, are not anticipated to result in erosion during implementation/operation.			
	C.	Be located on a geologic unit or soil that is unstable or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?			_X_
		See VI.A.			

VII. HISTORICAL RESOURCES – Would the proposal result in: The alteration or destruction of a prehistoric or historic archaeological site? X Potential project areas include portions of the City known for high historical resource sensitivity, such as the La Jolla Shores area, Los Peñasquitos, and Mission Valley. See the Initial Study for further discussion. B. Adverse physical or aesthetic effects to a prehistoric or historic building, structure, object, or site? X See VII.A. C. Adverse physical or aesthetic effects to an architecturally significant building, structure, or object? X The activity type of capital improvement projects includes construction of infiltration strips and boxes/vaults within existing City streets, parks (underground), and parking lots. Excessive infiltration has the potential to damage nearby street, sidewalk, and building improvements. See the Initial Study for further discussion. D. Any impact to existing religious or sacred uses within the potential impact area? X See VII.A. The disturbance of any human remains, including those interred outside of formal cemeteries? X Although construction of the capital improvement projects would occur in existing City streets, parks (underground), and parking lots, there is the potential to disturb undiscovered human remains. See VII.A.

Maybe

No

Yes

Yes Maybe No

# VIII. HUMAN HEALTH / PUBLIC SAFETY / HAZARDOUS MATERIALS – Would the proposal:

A.	Create any known health hazard (excluding mental health)?		1	_X
	Implementation of the activity types, including construction and operation of the capital improvement projects, is not anticipated to create a health hazard.			
B.	Expose people or the environment to a significant hazard through the routine transport, use, or disposal of hazardous materials?		, , ,	X
	Minor amounts of hazardous materials, such as fuel, would be transported only during construction of the capital improvements projects.			
C.	Create a future risk of an explosion or the release of hazardous substances (including, but not limited to, gas, oil, pesticides, chemicals, radiation, or explosives)?			X
	See VIII.B. Implementation of the activity types, including operation of the capital improvement projects, would not require the use of hazardous substances.			
D.	Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?		· <u>·</u>	_X_
	The activity type of other non-structural projects includes targeted street sweeping, which would involve modifying street sweeping frequencies and routes to target specific pollutants on City streets.  Coordination with the General Services  Department/Street Division would minimize impacts to traffic and emergency response			
	times.			

		Yes	Maybe	No
E.	Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, create a significant hazard to the public or environment?			_X_
	Implementation of the capital improvement projects would occur within existing City streets, parks (underground), and parking already and regularly used by the public for transportation and recreation and would not be in areas known for hazardous material sites.			
F.	Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?		· . <u> </u>	<u>X</u>
	See VIII.C.			
НУ	DROLOGY / WATER QUALITY – Would the	proposal	result in:	
A.	An increase in pollutant discharges, including downstream sedimentation, to receiving waters during or following construction? Consider water quality parameters, such as temperature-dissolved oxygen, turbidity, and other typical storm water quality.			_X_
	The activity types would be implemented to improve and protect water quality. Standard storm water BMPs would be used during construction of the capital improvement projects.			
B.	An increase in impervious surfaces and associated increased runoff?			_X_
	The capital improvement projects would reduce impervious surfaces and associated increased runoff through infiltration.			

IX.

		Yes	Maybe	No
C.	Substantial alteration to on- and off-site drainage patterns due to changes in runoff flow rates or volumes?			_X_
	Although the capital improvement projects would reduce runoff flow rates and volumes through infiltration, substantial alteration to drainage patterns are not anticipated due to projected wide spacing between the projects.			
D.	Discharge of identified pollutants to an already impaired water body (as listed on the Clean Water Act Section 303(d) list)?			_X_
	The activity types would be implemented to improve and protect water quality, including that of water bodies on the 303(d) list.	* 15		
E.	A potentially significant adverse impact on groundwater quality?	1.	-	_X_
	Only minor amounts of water would infiltrate into the ground via the infiltration projects and are not anticipated to reach the groundwater table. Infiltration projects would be designed to allow for bypassing of urban runoff into the storm drain system if infiltration capacity is reached.			
F.	A causation of or contribution to an exceedance of applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses?			_X_
	The activity types would be implemented to improve and protect water quality. See IX.E.			

		Yes	<u>Maybe</u>	<u>No</u>
х.	LAND USE – Would the proposal result in:			
P	A. A land use which is inconsistent with the adopted community plan land use designation for the site, or a conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project?		, ,	_X_
	The capital improvement projects would be integrated into existing City streets, parks (underground), parking lots, and the storm drain system and, therefore, would not conflict with any existing land use policy.  Implementation of the other activity types would not involve structures and, therefore, would not conflict any existing land use policy.			
	B. A conflict with the goals, objectives, and recommendations of the community plan in which it is located?	, , , , , , , , , , , , , , , , , , , ,	,	<u>X</u>

See X.A.

		Yes	Maybe	No
C.	A conflict with adopted environmental plans, including applicable habitat conservation plans adopted for the purpose of avoiding or mitigating an environmental effect for the area?	· ·	_X_	
	The capital improvement projects would be integrated into existing City streets, parks (underground), parking lots, and the storm drain system and, therefore, would not conflict with any existing environmental plans.  Implementation of the other activity types would not involve structures and, therefore, would not conflict any existing environmental plans or habitats. Although not considered a significant impact, the MHPA Land Use Adjacency Guidelines would be implemented when future projects are located adjacent to MHPA areas. No projects, however would be covered by this document if located within the MHPA and could result in direct impacts to resources.			
D.	Physically divide an established community?  See X.A.	-		_X_
E.	Land uses which are not compatible with aircraft accident potential as defined by an adopted airport Comprehensive Land Use Plan?			_X_

See X.A.

			Yes	Maybe	<u>No</u>
XI.	NO	ISE – Would the proposal result in:			
	A.	A significant increase in the existing ambient noise levels?			_X_
		Construction activity for the capital improvement projects would be temporary and would not significantly increase ambient noise levels and would not generate operational noise. Implementation of the other activity types would not significantly increase ambient noise levels.			
	B.	Exposure of people to noise levels which exceed the City's adopted noise ordinance?			_X_
		Temporary construction activities required for the capital improvement projects would not exceed City noise ordinances, and no operational noise would occur after construction. See XI.A.			
	C.	Exposure of people to current or future transportation noise levels which exceed standards established in the Transportation Element of the General Plan or an adopted airport Comprehensive Land Use Plan?			<u>X</u>
		Implementation of the activity types would not cause increased traffic levels or increase transportation noise levels.			
XII.	pro	LEONTOLOGICAL RESOURCES – Would the posal impact a unique paleontological resource site or unique geologic feature?	·	_X_	
		Potential project areas include portions of the City potentially underlain by geologic units of high paleontological resource sensitivity, such as the La Jolla Shores area, Los Peñasquitos, and Mission Valley. See the Initial Study for further discussion	,		

			Yes	Maybe	<u>No</u>
XIII.	PO	PULATION AND HOUSING – Would the propo	osal:		
	A.	Induce substantial population growth in an area, either directly (e.g., by proposing new homes and businesses) or indirectly (e.g., through extension of roads or other infrastructure)?			_X_
		Implementation of the activity types would not extend infrastructure or involve the construction of dwellings or businesses.			
	B.	Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?			_X_
		The capital improvement projects would be integrated into existing City streets, parks (underground), parking lots, and the storm drain system. No existing housing would be displaced.			
	C.	Alter the planned location, distribution, density, or growth rate of the population of an area?		-	_X_
		No such alterations would occur.			

Yes Maybe No

A.	Fire protection?	2		_X_
	Parking lots at municipal facilities (e.g., fire and police stations, parks, and streets) are potential sites for some of the capital improvement projects identified in the plans. Any implementation of these project types at those facilities would be coordinated with the partnering department to ensure delivery of services is not significantly impacted. Required traffic control plans would ensure that emergency access remains open at all times during construction of the capital improvement projects in City streets. Implementation of the other activity types would not result in the need for any new or altered government services.			
B.	Police protection?		-	_X_
	See XIV.A.			
C.	Schools?	:		_X_
	See XIV.A.			
D.	Parks or other recreational facilities?	( <u>****</u>	<del>- 1</del>	_X_
	See XIV.A.			
E.	Maintenance of public facilities, including roads?			_X_
	See XIV.A.	13		
F.	Other governmental services?	( <del></del>	<del></del>	_X_
	See XIV.A.			

			<u>Y es</u>	Maybe	<u>No</u>
XV.	RE	CREATIONAL RESOURCES – Would the pro-	posal:		
	A.	Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facilities would occur or be accelerated?		_	_X_
		Implementation of the activity types would not increase the use of existing parks or other recreational activities or require the construction of new recreational facilities.			
	B.	Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?			_X_
		See XV.A.			
XVI.	TR	ANSPORTATION / CIRCULATION – Would t	he propo	sal result in:	
	A.	Traffic generation in excess of specific community plan allocation?	-		_X
		Implementation of the activity types would generate traffic only during construction of the capital improvement projects. Such traffic generation would be mentoring during deliveries of equipment and materials, construction employee travel to and from the work site, and hauling of excavation material off site. This temporary minor traffic generation would not alter or add traffic in excess of specific community plan allocations.			
	B.	An increase in projected traffic which is substantial in relation to the existing traffic load and capacity of the street system?		v	_X_
		No long-term increase in traffic generation would occur as a result of implementation of the activity types. The temporary traffic increase during project construction would be insubstantial in relation to existing traffic in the project areas.			

		Yes	Maybe	<u>No</u>
C.	An increased demand for off-site parking?			_X_
	Implementation of the capital improvement projects would result in minimal and temporary off-site parking demand during construction only. Implementation of the targeted street sweeping would involve modifying current street sweeping frequencies and routes as regularly done by the General Services Department/Street Division to maximize efficiencies and resources.  Coordination with the General Services Department/Street Division would minimize impacts to street parking.			
D.	Effects on existing parking?			_X_
	During construction of the capital improvement projects, Traffic Control Plans (TCPs) would address temporary loss of existing parking in the immediate construction areas during work on surface streets and the storm drain system. This impact would not be significant. Any permanent loss of parking along streets because of the installation of infiltration strips and planters would be minimal and not significant. See XVI.C.			
E.	Substantial impact upon existing or planned transportation systems?			_X_
	TCPs would be prepared to coordinate construction traffic flows and minimize disruptive impacts to the surrounding vicinities during implementation of the capital improvement projects. No changes to long-term traffic patterns would result from implementation of any of the activity types.			
F.	Alterations to present circulation movements, including effects on existing public access to beaches, parks, or other open space areas?		, <u> </u>	_X_

		<u>Yes</u>	<u>Maybe</u>	<u>No</u>
G.	Increase in traffic hazards for motor vehicles, bicyclists, or pedestrians due to a proposed non-standard design feature (e.g., poor sight distance or driveway onto an access-restricted roadway)?	,		_X
	TCPs would address potential traffic hazards during construction of the capital improvement projects, which would be integrated into existing City streets and parking lots and the storm drain system and, therefore, would not cause traffic hazards during operation.  Implementation of the other activity types would not result in an increase in traffic hazards.			
H.	A conflict with adopted policies, plans, or programs supporting alternative transportation modes (e.g., bus turnout, bicycle racks, etc.)?			X
	Implementation of the activity types would not conflict with adopted policies, plans, or programs supporting alternative transportation modes.			
UT sub	ILITIES – Would the proposal result in a need for stantial alterations to existing utilities, including	or new sy :	stems or re	quire
A.	Natural gas?	-	2	<u>X</u>
	Implementation of the activity types, including the improvements to existing City streets, parks (underground), parking lots, and the storm drain system, would not require use of utilities per se and would be constructed to avoid impacts to existing utilities.			
B.	Communication systems?	8 <u></u>		<u>X</u>
	See XVII.A.			
C.	Water?		-	<u>X</u>
	See XVII.A.			

XVII.

			Yes	Maybe	<u>No</u>
	D.	Sewer?			_X_
		See XVII.A.			
	E.	Storm water drainage?		(A Company)	_X_
		Construction of the capital improvement projects would improve the storm drain system.			
	F.	Solid waste disposal?		2	_X_
		Solid waste disposal would be required for implementing the targeted street sweeping as part of the activity type of other non-structural projects. However, because targeted street sweeping would be in lieu of existing street sweeping in the targeted areas, no significant impacts to solid waste disposal services is anticipated.			
XVIII.	WA	ATER CONSERVATION – Would the proposal 1	esult in:		
	A.	Use of excessive amounts of water?	0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0	P	_X_
		During construction of the capital improvement projects, minor amounts of water would be used to dampen exposed dirt areas to control dust and wash excess dirt off construction equipment. Implementation of the project types would not require use of excessive amounts of water, if any at all.			

		Yes	Maybe	No
В.	Landscaping which is predominantly non-drought resistant vegetation?			_X_
	Native or naturalized plant species would be used to vegetate planter boxes that would be part of some of the capital improvement projects within existing City streets.  Revegetation after construction is not anticipated to be needed for projects within existing City streets and parking lots and the storm drain system. Landscaping would be restored to preconstruction conditions for underground projects in parks.			
MA	ANDATORY FINDINGS OF SIGNIFICANCE:			
A.	Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?			_X_
	Implementation of mitigation measures would reduce all impacts to below a level of significance. See the Initial Study for further discussion.			
B.	Does the project have the potential to achieve short-term, to the disadvantage of long-term, environmental goals? (A short-term impact on the environment is one which occurs in a relatively brief, definitive period of time, while long-term impacts would endure well into the future.)			<u>X</u>
	No long-term impacts to the environment are anticipated.			

XIX.

		Yes	Maybe	<u>No</u>
C.	Does the project have impacts which are individually limited, but cumulatively considerable? (A project may impact on two or more separate resources where the impact on each resource is relatively small, but where the effect of the total of those impacts on the environment is significant.)			<u>X</u>
	The following activity types contained in the plans would not directly result in the construction of above-ground structures and, therefore, would not significant impacts: water quality monitoring and pollutant source characterization; education, training, and outreach; inspection, investigation, and enforcement; good housekeeping BMPs; land use planning; Storm Water Standards Manual Update; and other non-structural projects. The following activity type may result in above-ground structures: capital improvement projects. However, it is anticipated that these structures would be improvements to existing City streets, parks (underground), parking lots, and the storm drain system and be widely spaced throughout the City and, therefore, would not result in significant cumulative impacts.			
D.	Does the project have environmental effects which would cause substantial adverse effects on human beings, either directly or indirectly?			<u>X</u>
¥	The activity types would be implemented to improve and protect water quality, which would benefit human beings.
